Regeneron Careers   October 28th, 2020
Regeneron Pharmaceuticals
777 Old Saw Mill River Rd
Tarrytown, NY 10591

Dear Sir or Madam,

I am very excited to apply to your vacant Bioinformatics Scientist position at Regeneron Pharmaceuticals. I was intrigued to see a call for an individual well-versed in multiomic analysis as well as biostatistics. I believe that my strong background in metabolomics, transcriptomics and genomics will make me an excellent candidate.

My postbaccalaureate experience at the NIH as well as my graduate career at Ohio State/NIH has given me a wide breadth of bioinformatic experience that has allowed me to be a productive research associate at the National Center for Advancing Translational Sciences (NCATS), as evidenced by my strong publication record. This experience will give me the adaptability to succeed in a new setting such as the Metabolism and Muscle group.

One of my main passion projects at NCATS has been the development of novel pathway enrichment methods for metabolite data, based on prior knowledge networks. This was a project I concieved of independently, and has already been featured in one published work from the lab. I am confident in my ability to leverage my mathematical training to continue to develop new statistical workflows in whatever context it is needed.

Thank you for the opportunity to apply. I am looking forward to potentially learning more about the Bioinformatics Scientist position and life at Regeneron. I'm a productive and goal-oriented individual, and I look forward to transitioning my talents to the biomedical research industry, where Regeneron is a leader.

Sincerely,

Andrew Patt

Andrew C. Patt
